

ARGUMENT GUIDELINE

Winterhalter Rack Pass Through Dishwashing Machine GS 502

The GS 502 is the logical, customer-oriented development of the tried and tested Winterhalter dishwashers. Three wash programmes of 60, 120 and 240 seconds duration guarantee excellent wash results even with stubborn dirt. With the convenient entry height of 420 mm, catering norm sizes up to GN 1/1, large plates and smaller equipment can be washed in the GS 502.

The GS 502 is particularly flexible due to the easy conversion from straight to corner operation.

SELF-EXPLANATORY ONE-BUTTON OPERATION WITH COLOUR CODING

BENEFITS FOR THE USER

⇒ for the operator

- colour coding:
 - green = ready
 - blue = rinse in process
 - red = warming up, not yet ready
- easy to understand, language-independent, simple to use
- ideal for inexperienced and regularly changing staff
- the operational status can be read off at a glance

⇒ for the person in charge

- a temperature and hygiene check is possible at all times via the operating display
- an integrated data memory allows you to call up the following consumption data:
 - water consumption
 - number of wash cycles
 - operating hours

⇒ for the service technician

- integrated error management: indicates faults via auto-diagnosis
 - fast fault diagnosis possible, thus avoiding unnecessary service costs
 - basic settings for an optimal wash process can be activated by the service technician at the press of a button
-

CAPACITY

- balanced wash system with fixed wash arms below and rotating wash arms above
- impossible to lose high-powered wash jets
- clear entry height 420 mm

BENEFITS FOR THE USER

- constant and all-over cleaning result during the whole wash cycle
- dishes remain in a stable situation
- excellent wash result even in case of stubborn dirt deposits
- free from clogging
- suitable for trays up to GN 1/1 and large plates

HYGIENE INTERIOR

- deep-drawn seamless hygiene tank in one piece with external tank heating
- extensive filter system above the water level
- filter cassette to filter out coarse debris
- lye filtration Mediamat Cyclo
- WIHTec (Winterhalter Indirect Heating Technology)
- wash distribution completely outside the interior
- integrated self-cleaning programme at the press of a button

BENEFITS FOR THE USER

- due to rounded surfaces and corners dirt deposits have no chance – no intrusive heating element projects into the tank
- easy cleaning of the tank possible
- dirt is reliably kept out of the wash water
- easy to remove; no need to drain the tank water
- fine debris is filtered out of the wash water during the wash process
- effective saving of detergent, energy and water
- the heating element is entirely flush with the wash tank wall, providing no place for dirt or lime scale to build up
- effective saving of service costs
- no standpipes etc. which can become soiled
- the interior of the machine is completely cleaned
- the washer switches off automatically at the end of the self-cleaning programme
- thanks to the drainage pump fitted as standard no dirty water remains in the machine at the end of operation; this prevents smells arising
- no operator errors possible
- the operator can take care of other work, thus saving working time and personnel costs

ERGONOMICS / HANDLING

- rack carrier designed to pivot upwards or be removed completely
- completely ergonomic hood handle
- easily removable wash arms
- all equipment accessible from the front or side
- double-skinned hood design with maximum weight alleviation
- programme start by closing the hood

BENEFITS FOR THE USER

- problem-free access to the interior of the machine
- ergonomically ideal handling from any position (e.g. straight version or corner version)
- easier to clean ⇒ constantly perfect dishwashing result
- easy service
- heat insulation and sound absorbing
- minimum effort for the operator to open and close the door
- user-friendly, fast, uncomplicated working

ECONOMY

- control function for the person in charge
- service diagnosis programme
- protection class IPX 5 incl. rear panel as standard
- ready for connection

BENEFITS FOR THE USER

- wash cycles and consumption values can be monitored on the display
- control function: is the washer loaded to the maximum:
 - effective use of working time?
 - best possible exploitation of investment?
 - effective use of resources?
- fast repair via electronic fault diagnosis
- avoidance of unnecessary service costs via auto-diagnosis
- machine is completely protected against dirt or moisture
- the machine is equipped as standard with an electrical cable, water supply and drainage hoses and a drainage pump
- the defined standard parameters (e.g. temperatures) ensure simple, fast and thus cost-saving installation
